SUCCESS STORY

A robust portable intranet framework for
SharePoint users

BeetleRim's framework was user-friendly, cost-effective and customizable to multi-domain and multi-market environments.

The solution

- Business users need knowledge of SharePoint to use it well.
- Managing information across regions can be difficult.
- It is often expensive and time-consuming to develop separate sites for each region.
- The sites need daily updates and this requires dedicated resources with SharePoint knowledge.

The solution

BeetleRim developed a cutting-edge SharePoint application that is user-friendly and easy/cost-effective to maintain.

The site supports region-wise customizations, including department-specific calendar events, enhancements and announcements.

Organizational rewards & recognition, achievements and accomplishments are also customizable.

Benefits

- A robust framework, that is completely portable across businesses by just changing content
- Interactive user interface, developed in SharePoint and presented to users as a user-friendly and feature-rich web-based application
- The management could now change content and layout without SharePoint knowledge.

...and key value propositions

| Strong governance model | Improved efficiency and productivity | Time savings | Increased revenues | Enhanced customer delight |
